ADVICE NOTE

Dear Valued Customer:

Formosa Chemicals & Fiber Corp.(FCFC) will gradually transition to new packaging from March 2024. The current packaging features single-color printing and will be replaced with dual-color printing. In alignment with the company's commitment to ESG principles, the packaging for Polypropylene Impact-resistant specifications (Ethylene-Propylene Copolymer) will incorporate recycled PP resin, maintaining an environmentally friendly PP woven bag (with the addition of "This bag is Eco-friendly made from Recycled PP Resin" on the front bottom left corner).

Due to the phased replacement, there will be a coexistence of both packaging types during shipments. Once the existing inventory of the old version packaging is sold out, all supplies will exclusively feature the new version woven bag packaging. At that time, notification of the change will be provided on the company's official website www.fcfc-plastics.com. The images of the packaging bags are shown below.
